PARTS & SPECIFICATIONS MODEL 1331 CRANE

This manual is for an inactive product and is provided for our customer's convenience.

To navigate this document, use the index at left. There may also be hot spots (●) within the manual, which may be clicked on, to navigate to related information.

INTRODUCTION – READ CAREFULLY!

This volume deals with information applicable to your particular crane. For operating, maintenance and repair instructions, refer to Volume 1, *OPERATION, MAINTENANCE AND REPAIR*. Volume 1 contains the following information:

- SECTION 1. OPERATION
- SECTION 2. MAINTENANCE
- SECTION 3. REPAIR
- SECTION 4. INSTALLATION -
CHASSIS PREPARATION
- SECTION 5. APPENDIX

We recommend that Volume 2, *PARTS AND SPECIFICATIONS* be kept in a safe place in the office.

This manual is provided to assist you with ordering parts for your IMT truck-mounted articulating crane. It also contains additional instructions regarding your particular installation.

It is the user's responsibility to maintain and operate this unit in a manner that will result in the safest working conditions possible.

Warranty of this unit will be void on any part of the unit subjected to misuse due to overloading, abuse, lack of maintenance and unauthorized modifications. No warranty - verbal, written or implied - other than the official, published IMT new machinery and equipment warranty will be valid with this unit.

In addition, it is also the user's responsibility to be aware of existing Federal, State and Local codes and regulations governing the safe use and maintenance of this unit. Listed below is a publication that the user should thoroughly read and understand.

ANSI/ASME B30.5-1982
MOBILE AND LOCOMOTIVE CRANES
The American Society of Mechanical
Engineers
United Engineering Center
345 East 47th Street
New York, NY 10017

Three means are used throughout this manual to gain the attention of personnel. They are NOTE's, CAUTION's and WARNING's and are defined as follows:

NOTE

A NOTE is used to either convey additional information or to provide further emphasis for a previous point.

CAUTION

A CAUTION is used when there is the strong possibility of damage to the equipment or premature equipment failure.

WARNING

A WARNING is used when there is the potential for personal injury or death.

Treat this equipment with respect and service it regularly. These two things can add up to a safer working environment.

Section 1. SPECIFICATIONS

GENERAL

Crane Rating	(17.91 ton-meters)	129,500 ft.-lbs.
Reach (from centerline of rotation)	(9.40 m)	30'-10"
Hydraulic Extension	(213 cm)	84"
* Lifting Height	(12.67 m)	41'-7"
Crane Weight	(4,287 kg.)	9,450 lbs.
Outrigger Span	(4.57 m)	15'-0"
* Storage Height	(4.04 m)	13'-3"
** Base Mounting Space Required	(91.4 cm)	36"
Optimum Pump Capacity		
(tandem pump - each section)	(60.6 liters/min.)	16 U.S. Gal./min.
Oil Reservoir Capacity	(148 liters)	39 U.S. Gallons
*** Vertical Center of Gravity (from bottom of crane)	(147.3 cm)	58"
*** Horizontal Center of Gravity		
(from centerline of rotation)	(182.9 cm)	72"
Design Factors - pins and hydraulics	4/1	4/1

* Based on 41" (104.1 cm) truck frame height.

** Allow an additional 3" (7.6 cm) between the truck cab and body for clearance between the cab, crane and body.

*** Based on hydraulic extension fully retracted, inner and outer booms horizontal and hydraulic fork and rotator attached.

LIFTING CAPACITY (from centerline of rotation)

23'-10" (7.26 m)	(2,449 kg.)	5,400 lbs.
30'-10" (9.40 m)	(1,905 kg.)	4,200 lbs.

* PERFORMANCE CHARACTERISTICS

Rotation - 400° (7.18 Rad.)	30 Seconds
Inner Boom Elevation - -20° to +72° (-0.35 Rad. to +1.26 Rad.)	22 Seconds
Outer boom Articulation - 168° (2.93 Rad.)	23 Seconds
Extension Boom - 84" (213.4 cm)	10 Seconds
Outrigger Extension - 29-1/4" (74.3 cm)	32 Seconds

* Based on Optimum oil flow of 16 GPM (60.6 liter/min.) for each function.

POWER SOURCE

Integral-mounted, tandem pump and PTO application. Other standard power sources may be utilized. Minimum horsepower required is 55 horsepower.

ROTATION SYSTEM

Turntable bearing powered with a high-torque hydraulic motor through a ring-and-pinion type spur gear train. A fail-safe, spring-loaded brake is supplied between the drive gear and the motor providing rotational and parking brake action. Total gear reduction is 68.3 to 1.

CYLINDER HOLDING VALVES

The holding sides of all cylinders are equipped with integral-mounted counter-balance valves to prevent sudden cylinder collapse in case of hose or other hydraulic component failure. In addition, the outer, extension and outrigger cylinders feature double holding valves. The counter-balance valve serves several functions. First, it is a holding valve. Secondly, it is so constructed that it will control the lowering function and allow that motion to be feathered while under load. Finally, if a hose fails, the only oil loss will be that in the hose.

CYLINDERS

	Bore	Stroke
Inner Cylinder	(17.8 cm) 7"	(76.8 cm) 30-1/4"
Outer Cylinder	(16.5 cm) 6-1/2"	(139.7 cm) 55"
Extension Cylinder	(7.6 cm) 3"	(213.4 cm) 84"
Outrigger Cylinder	(16.5 cm) 6-1/2"	(74.3 cm) 29-1/4"

HYDRAULIC SYSTEM

Open-centered, full pressure system with tandem pump requiring 16 U.S. GPM (60.6 liters/min.) optimum oil flow at 2500 PSI (175.7 kg. sq. cm.). Six-spool, stack-type control valve bank with mid-inlet (to feed 4 crane functions and 2 additional functions for a wallboard fork). A separate 2-spool valve bank installed on the base operates the curb- and street-side outriggers. System includes hydraulic oil reservoir, suction- and return-line filters, control valve banks and all necessary hoses and fittings.

CAPACITY ALERT SYSTEM

A pressure sensor mounted on the inner boom cylinder and connected hydraulically to the lift side of the outer boom and the extend side of the extension boom provides a capacity alert system. If the operator tries to pick up a load in excess of crane capacity, the outer boom lift and extension out functions will not operate. To relieve the condition, the outer boom can be lowered or the extension boom can be retracted.

MINIMUM CHASSIS SPECIFICATIONS

Body Style		Conventional Cab
Wheel Base	(604.5 cm)	238"
Cab to Trunnion	(457.2 cm)	180"
Frame Section Modulus	(492 cc)	30.0 in. ³
R B M	(38,021 kg-m)	3,000,000 in.-lbs.
Front Axle	(7,258 kg.)	16,000 lbs.
Rear Axle	(17,237 kg.)	38,000 lbs.
Transmission		5-speed

In addition to these specifications, heavy-duty electrical and cooling systems and dual, tandem rear wheels are required. It is recommended that the vehicle be equipped with an electric engine tachometer, auxiliary brake lock and power steering.

Figure A-1. Geometric Configuration

Figure A-2. Capacity Chart

Section 2. CRANE DESCRIPTION

2-1. GENERAL

The 1331 crane is designed primarily for use as a wallboard handling crane and is used with the wallboard fork. This section describes the major assemblies on this crane and Figure B-1 illustrates their location.

2-2. BASE

The base provides the means for mounting the crane on the truck chassis. It incorporates the 400° (7.18 Rad.) rotation mechanism and the outriggers. The outriggers are powered by double-acting hydraulic cylinders to provide stabilization during crane operation - maximum span is 15'-0" (4.57m). In addition, the base includes the ladder and platform for gaining access to the operator's station.

2-3. MAST

The mast provides the necessary elevation for crane operation as well as a hinge point for the inner boom. In addition, the operator's station is a part of the mast providing for a clear, unobstructed view of the work area.

2-4. INNER BOOM

The inner boom will swing through a full 92° (1.61 Rad.) from -20° to +72° (-0.35 Rad. to +1.26 Rad.). It is raised and lowered through the use of a single, double-acting hydraulic cylinder.

2-5. OUTER BOOM

The outer boom will swing through 168° (2.93 Rad.). It is raised and lowered through the use of a double-acting hydraulic cylinder mounted on top of the inner boom. The outer boom also provides storage for the extension boom in the retracted position.

2-6. EXTENSION BOOM

The single-stage extension boom increases the operating range from 23'-10" (7.26m) to 30'-10" (9.40m). The extension boom contains the hydraulic hoses feeding the fork and rotator.

2-7. CONTROLS

There are two sets of controls on the standard crane - a 2-spool valve bank located on the base of the crane which controls the outriggers and a 6-spool valve bank at the operator's station which controls crane and fork operation.

Figure B-1. 1331 Crane Group

Section 3. INSTALLATION

3—1. GENERAL

This section contains specific instructions for the installation of your crane. Prior to installing the crane and hydraulic components, make sure the chassis is ready to receive the crane (refer to Section 5, Installation - Chassis Preparation in Volume 1).

3—2. CRANE INSTALLATION

To install the crane on the chassis:

1. Use a lifting device capable of lifting the weight of the crane - 9,450 lbs. (4,287 kg). Attach the lifting device to the lift bracket welded to the top of the inner boom. Lift the crane, move the chassis into position under the crane and lower the crane into position on the chassis. Allow sufficient room between the crane and cab - at least 3" (7.6 cm). Check for front-to-rear alignment.
2. Install the tie rods, clamp plates, lock nuts and hardened flat washers to secure the crane base to the chassis (Figure C-1). Power wrench the nuts tight.

WARNING

Do not attempt to apply the same torque to the tie rod and self-locking nuts as shown in the Torque Data Chart in the APPENDIX in Volume 1. Do not exceed 200 ft. lbs. (28 kg-m). Exceeding this torque value could damage either the chassis or crane base.

Power wrenching is not recommended until the lead thread of the nut insert is engaged by hand turning.

3. Install the tie plate (item 10), Figure C-1) on the truck chassis. Drill four holes using the plate as a template and install the bolts and lock nuts. Torque the bolts to 200 ft. lbs. (28 kg-m). Weld the tie plate to the crane base with a 3/8" continuous fillet weld.
4. Install the tension bar (item 5, Figure C-1) with nuts and washers as shown. Tighten the outside nuts first to about 200 ft. lbs. (28 kg-m) to preload the tension bar. Then tighten the inner nuts to 466 ft. lbs. (65 kg-m).
5. Touch up paint on crane and chassis as necessary.

Item No.	Description	Qty
2.	Outrigger Tie Bar Block	2
3.	Clamp Plate	4
5.	Tension Bar	1
7.	Frame Reinforcement Bar	1
8.	Frame Flange Spacer	2
10.	Plate	2
15.	Tie-Down Stud	8
24.	Screw; 3/4-10 x 1-1/2" hex hd.	10
26.	Tension Bar Nuts; 1-8	2
27.	Lock Nut; 3/4-10	10
28.	Tie-Down Stud Lock Nuts; 1-1/4 - 7	16
31.	Tension Bar Lock Washer; 1"	2
32.	Tie-Down Stud Washers; 1-1/4"	16

Figure C-1. Crane Installation

3-3. HYDRAULIC INSTALLATION

To install the hydraulic hoses, fittings, etc.:

1. Plumb the suction line filters as shown in Figure C-2.
2. Install the 1-1/4" ID suction hose between the suction line filters and the pump inlets. Tighten the hose clamps.
3. Install the 3/4" pressure hose between the pump outlets and the inlet ports on the valve banks.
4. Install the return line between the reservoir return line filters and valve bank (if applicable).
5. Fill the hydraulic oil reservoir.

6. Open the gate valves at the suction line filter.

CAUTION

Failure to open the gate valve will result in a dry running pump which may damage the pump.

7. Open the return gate valve.
8. Start the vehicle engine and engage the PTO. Allow the system to run for about five minutes and then check the vacuum gauges on the suction-line filters (should read 8" or less of mercury). If the vacuum reading is too high, check to make certain that the gate valves are open. If the gate valves are open, check for a collapsed or restricted suction line.
9. Check for leaks and repair if necessary.

Item No.	Description	Qty
1.	Hose; 3/4" ID	1
4.	Pump Support	1
9.	Oil Filter Bracket	6
11.	Vacuum Gauge	2

Section 4. PARTS LIST

4—1. GENERAL

This section contains the exploded parts drawings with the accompanying parts list for the assemblies used on this crane. These drawings are intended to be used in conjunction with the instructions found in the REPAIR section in Volume 1. For optional equipment such as winches and remote controls, refer to the appropriate service manual.

WARNING

Do not attempt to repair any component without reading the information contained in the REPAIR section in Volume 1. Pay particular attention to the WARNING's, CAUTION's and NOTE's contained in that section. Failure to comply with these instructions may result in damage to the equipment, an injury or even death.

4—2. CRANE IDENTIFICATION

Every crane has an identification placard (Figure D-1) attached to the mast or one of the booms in a prominent location. When ordering parts, communicating warranty information or referring to the unit in correspondence, always include the assigned serial and model numbers. All inquiries should be directed to Iowa Mold Tooling Co., Inc.; 500 Highway 18 West; Garner, Iowa 50438; telephone: (515) 923-3711 or TWX 910-523-6930. In Canada; IMT Cranes Canada, Ltd.; Orillia, Ontario; telephone: (705) 325-7458.

Figure D-1. Serial Number Placard

4—3. CYLINDER IDENTIFICATION

The crane has a cylinder identification placard (Figure D-2) attached to the mast. To ensure proper replacement parts are received, it is necessary to specify a complete number/letter sequence for any part request. Part numbers may be cross checked by comparing the stamped identification of the cylinder case (Figure D-3) against the information stamped on the placard. You must use the part number stamped on the cylinder case when ordering parts.

Figure D-2. Cylinder Identification Placard

Figure D-3. Cylinder Part Number Location

Figure D-4. Weldment Part Number Locations

4—4. WELDMENT IDENTIFICATION

Each of the major weldments - base, mast, inner boom, outer boom, extension boom and outrigger weldments - bear a stamped part number. Any time a major weldment is replaced, you must specify the complete part number as stamped on the weldment. The locations of the part numbers are shown in Figure D-4.

4—5. ORDERING REPAIR PARTS

When ordering replacement parts:

1. Give the model number of the unit.
2. Give the serial number of the unit.
3. Specify the complete part number. When ordering cylinder parts or one of the main weldments, always give the stamped part number.
4. Give a complete description of the part.
5. Specify the quantity required.

Figure D-5.

Base and Outrigger (Part Number 41703776)

NOTE

Anytime the pin retainer plate bolts (item 62) have been removed, apply Loctite 262 to the threads before re-assembly.

NOTE

Whenever the cylinder is disassembled, we strongly recommend replacing all of the components found in the seal kit. This may save expensive down-time in the near future. In addition, use NEVER-SEEZ between the head and case when assembling the cylinder.

DIMENSIONS

Bore	7"
Stroke	30-1/4"
Rod Diameter	3-1/2"
Pin Diameter	2-1/2"
C-C Closed	44"

NOTE

Whenever the cylinder is disassembled, we strongly recommend replacing all of the components found in the seal kit. This may save expensive down-time in the near future. In addition, use NEVER-SEEZ between the head and case when assembling the cylinder.

Hydraulic Kit (Part Number 91703857)

[CLICK HERE TO SEE PARTS LIST](#)

Description of Capacity Alert System

Because of the possibility of personnel injury or equipment damage due to overloading a crane, IMT is providing a capacity alert system as standard equipment on all 1331 cranes manufactured after December 1, 1980.

The capacity alert system prevents the operator from raising the outer boom or extending the extension boom to a point where the crane is overloaded. Once the crane reaches an overload condition, both functions will no longer operate in that direction but may be reversed to eliminate the overload condition.

The inner cylinder incorporates a sensor valve mounted on the cylinder port block which monitors the inner cylinder's internal pressure. Raising the outer boom or extending the extension boom will increase the operating radius of the load, resulting in an increase in the inner cylinder's internal pressure. At a point in the process where the pressure exceeds a pre-determined setting, an overload condition exists and the sensor valve will dump hydraulic oil from the biasing cavity of the overstress valve to the oil reservoir. In turn, this will open the overstress valve which is connected to the rod end (retract side) of the outer cylinder and the base end (extend side) of the extension cylinder, dumping the hydraulic oil from these functions to the oil reservoir. This prevents the operator from raising the outer boom or extending the extension boom. However, the operator may reverse either of these functions to relieve the overloading condition.

This system is not intended as a substitute for good operator judgement and operating practices. Under no circumstances should the operator attempt to lift more than the rated load at a given radius of operation.

DIMENSIONS

Bore	4"
Stroke	12"
Rod Diameter	2"
Pin Diameter	1-1/2"
C-C Closed	24"

NOTE

Whenever the cylinder is disassembled, we strongly recommend replacing all of the components found in the seal kit. This may save expensive down-time in the near future. In addition, use NEVER-SEEZ between the head and case when assembling the cylinder.
