When using the torque data in the charts above, the following rules should be observed.

1. Bolt manufacturer's particular specifications should be consulted when provided.
2. Flat washers of equal strength must be used.
3. All torque measurements are given in foot-pounds. To convert to inch-pounds, multiply by 12.
4. Torque values specified are for bolts with residual oils or no special lubricants applied. If special lubricants of high stress ability, such as Never-Seez compound graphite and oil, molybdenum disulphite, collodial copper or white lead are applied, multiply the torque values in the charts by the factor .90. The use of Loctite does not affect the torque values listed above.
5. Torque values for socket-head capscrews are the same as for Grade 8 capscrews.

WARNING

Anytime a gear-bearing bolt is removed, it must be replaced with a new bolt of the identical grade and size. Once a bolt has been torqued to 75% of its proof load and then removed, the torque coefficient may no longer be the same as when the bolt was new thus giving indeterminate clamp loads after torquing. Failure to replace gear-bearing bolts may result in bolt failure due to metal fatigue causing serious injury or DEATH.

INSTALLATION OF AUXILIARY CHASSIS GROUND CABLE KIT (51716427)

Due to the increased use of electrical components installed on IMT products, we have instituted the practice of installing an auxiliary ground cable between the chassis frame and battery ground terminal, to assist the electrical system of both IMT product and chassis. If your equipment does not include the cable, consider adding the ground cable for added assistance. Install the auxiliary ground cable as follows:

1. Connect one end of cable to chassis frame using 3/8" x 1-1/2" bolt, 5/16" flat washer, 3/8" lock washer, and 3/8" hex nut. See Note.

2. Connect the remaining end of the cable to the ground terminal of the chassis battery or to the engine block. See Note.

NOTE

Ground connections made to metal surfaces shall maintain contact integrity when subjected to the normal effects of aging, temperature cycling, moisture, splash, spray washing, fatigue, and other environmental conditions. Metal surfaces shall be free of primer, paint, rust, and corrosion, and have a bright, polished appearance immediately before the ground terminal is connected. A steel flat washer, with an outside diameter approximately equal to the ring terminal diameter, shall be placed between bolt head and terminal. Grounding studs and joints shall be dedicated to the ground and not be used as a structural joint.

(FOR DA435HAR10 COMPRESSOR INSTALLATION ONLY)

(FOR DAR60 SERIES COMPRESSOR INSTALLATION ONLY)

NOTE:

WHEN INSTALLING WITH A DAR60 SERIES COMPRESSOR, CONNECT THE 'FROM PRESSURE SWITCH' CIRCUIT TO THE COMPRESSOR HOUR METER 12V SIGNAL INPUT. THE 'COMPRESSOR GROUND' AND THE 'TO PRESSURE SWITCH' CIRCUITS WILL NOT BE USED. CHANGE JUMPER 'P1' ON THE ELECTRICAL CONTROL BOX CIRCUIT CARD, TO PINS '1' TO '3'.

FOR ALL OTHER COMPRESSOR APPLICATIONS, VERIFY THAT THE 'P1' JUMPER IS LOCATED IN THE '2' TO '4' POSITION.

"ENGINE SPEED OUT" CIRCUIT MODIFICATION

(FOR DAR60 SERIES COMPRESSOR INSTALLATION ONLY)

NOTE:

WHEN INSTALLING WITH A DAR60 SERIES COMPRESSOR, CONNECT THE 'ENGINE SPEED OUT' CIRCUIT TO THE 12V SOLENOID HYDRAULIC DUMP VALVE LOCATED ON THE DAR60 SERIES COMPRESSOR MOUNTING BASE. THIS WILL ALLOW FOR THE CRANE HYDRAULIC CIRCUIT TO BE ACTIVATED.

IN CONJUNCTION WITH THIS, THE TETHERED REMOTE CONTROL HANDLE WILL REQUIRE THE FOLLOWING MODIFICATION TO THE INTERNAL WIRING CIRCUIT:

TAKE THE 'BROWN W/RED STRIPE' WIRE ON ENGINE SPEED SWITCH AND MOVE TO THE CENTER POSITION OF THE SAME SWITCH.
